

# The VDL Agrotech Feed Distribution Unit makes everything fall into place!

- Distribution of restricted feed portions for better uniformity
- Filling of pre weighed feed portions by means of centrally controlled automatic outlet valves
- Distribution unit of stainless steel
- Distribution unit single, with 6 outlets Ø 50 mm.
- Capacity per outlet 8,4 liter (= ± 5,5 kg feed)
- Modular system for assembling single- en double units
- Pneumatically operated slides for simultaneous feed administration
- Suspension sets for Ø50, Ø60, Ø75 en Ø90 mm transport tubes

**VDL Agrotech**

## The VDL Agrotech Feed Distribution Unit makes everything fall into place!

The Feed Distribution Unit is applicable to houses with sows, gilts or fatteners. It can be installed with the VDL tube feeding system or auger system. The hopper is made of stainless steel.

The Feed Distribution Unit ensures a good and even distribution of a pre-weighed portion of feed in a long trough. All pigs are offered the same amount of feed simultaneously. Herewith a better uniformity is achieved.

The charging of the hoppers through automatically controlled valves. When all Feed Distribution Units are filled the central pneumatically controlled opening mechanism opens all units for simultaneously feeding in all sections.
